

STORMWATER REVIEW ADVISORY

On **May 4, 2010**, the latest version of the Stormwater Management Regulations will become the criteria for gaining approval of stormwater management designs. The stormwater management approval process requires time for the reviewer to analyze the design in detail. Therefore, a project must be submitted with sufficient lead time if the design has been created using the present version of the Stormwater Management Regulations.

The following dates are suggested for gaining approval using the present Stormwater Management Regulations:

1. **DECEMBER 31, 2009**

All designs submitted after this date is expected to be expedited reviewed if planning to gain approval under the present Stormwater Management Regulations.

2. **MARCH 31, 2010**

All designs submitted after this date with or without an expediter will have an **extremely low** probability of gaining approval using the present Stormwater Management Regulations.

Please be advised that in order to gain stormwater management approval under the existing Stormwater Management regulations both Stormwater Management AND Erosion and Sediment Control must be approved by the Plans Review Section by May 4, 2010.
